Web site address: N/A

Document Location: UNM Library

Work initiated by: UNM Community and Regional Planning Department

Work funded by: UNM Community and Regional Planning Department

Type of review: Other - Academic review

Location of Work: Gila River basin

Abstract or brief summary:

This Masters thesis discusses future water management of the Gila River. The 2004 Arizona Water Settlements Act provides New Mexico with 140,000 acre-feet of water over a 10 year period. The ASWA also grants \$66-128 million for New Mexico to use to meet water demand in southwestern New Mexico. NMISC will make decisions on how to use funding. Thesis present three options: (1) Use private market to invest in in-stream flows; (2) New Mexico could lease water rights to Arizona; or (3) New Mexico dedicates its new water rights to instream flows.

Document Location: On Internet

Work initiated by:

Work funded by: Gila Conservation Coalition

Type of review: Other - internal peer review

Location of Work: Gila River basin

Abstract or brief summary:

The report presents a preliminary economic analysis of a proposal to divert water from the Gila River. The Arizona Water Settlements Act provides \$66 million of federal dollars for local or regional water supply projects. The act also provides up to an additional \$62 million to subsidize the consumptive use of 14,000 acre of water per year on average. The most likely buyers of such water would be municipal water users in Grant County, specifically Silver City, and nearby towns. This economic analysis provides a first step towards a more complete water plan for the region.

Document Location: On Internet

Work initiated by: U.S. Forest Service Rocky Mountain Experiment Station

Work funded by: U.S. Forest Service Rocky Mountain Experiment Station

Type of review: Agency review

Location of Work: Catron and Grant Counties

Abstract or brief summary:

The historical record supported by tree ring analysis indicates that fire played a dominant role in pre-settlement southwestern vegetation types within Arizona and New Mexico. The wild land fire threat has been dealt with effectively by aggressive fire suppression. Without fire, ecosystem health began changing. Forest fuels have increased that were once recycled by frequent surface fires. As a result fire size and intensity as well as suppression costs have increased. The use of wild land prescribed fire over time will improve ecosystem health and reduce suppression costs of unnecessary wild land fire. The cost of returning fire to some areas will be high; therefore, we must evaluate the risk involved if nothing is done.

Document Location: Library

Work initiated by: L. Allen Torell and Tracy W. Drummond

Work funded by: Unknown

Type of review: Journal peer review

Location of Work: Catron and Grant Counties

Abstract or brief summary:

A study was undertaken to estimate the impacts of increased federal grazing fees on the current holders of grazing permits for the Gila National Forest (GNF). A multi-period linear programming model was developed using 1992 national forest ranch budgets as baseline data. At a federal grazing fee of \$3.96/animal unit month (AUM) as proposed by Rangeland Reform '94, an additional 20% of GNF permittees were projected to go out of business. These would be the small, high-debt, ranches and large ranches with intermediate levels of debt. The largest grazing fee receipts were generated at the \$3.96/AUM fee.

Type of review: Unknown

Location of Work: Southwest New Mexico

Abstract or brief summary:

This 9 page memo provides an evaluation of the data, analysis, and conclusions presented in an ECONorthwest Economic Study entitled "The Potential Economic Costs of a Gila River Diversion". The ECONorthwest economic analysis appears designed to support a strong bias against any development of the additional Gila Basin water provided New Mexico in the 2004 Arizona Water Settlements Act. Reviewers note in the ECONorthwest report that accurate technical underpinnings are often absent, based on supposition, or simply false. Where accepted current data exists, but fails to support the conclusions anticipated in the study, the authors show no hesitation in creating new data. The memo Includes detailed comments on the conceptual model of the ECONorthwest Economic Study.
