Location of Work:

Abstract or brief summary:

This study presented in the paper presents data on three species of Chihuahuan Desert reptiles that occur near stream associated habitat. This includes two turtles (*Chrysemys picta* and *Trionyx spiniferus*) as well a garter snake (*Thamnophis sirtalis*). The article looks at the ranges of these species in relation to ancient playa lakes that occurred in southwestern New Mexico including Lake Cabeza de Vaca which covered 9000-10,000 square miles and the Animas and Playas Basins.

Topic category: Reptiles

Keywords: Lizards

County: All

Title: Seasonal occurrence and habitat utilization by lizards in southwestern New Mexico

Author: Baltosser, W.H., and T.L. Best

Date: 1990

Publication/journal/publisher: Southwestern Naturalist 35(4): 377-384

Type of document: Journal

Source of document / Search method (phone, internet, library, etc.): Internet

Location of Work:

Abstract or brief summary:

Prior to this paper there were no published records of predation on the ridge nose rattlesnake. This paper provides data gathered from mark-capture studies in the Animas Mountains of Hidalgo County , NM. A marked ridge nose rattlesnake was found dead and eaten. It was believed to have been killed by a raptor. Inside the carcass were the remains of a southern pocket gopher.
