		<p>Title ENVIRONMENTAL STUDY NAVAJO INDIAN IRRIGATION PROJECT Subtitle This study has been conducted to evaluate the possible impacts of constructing and operating the Navajo Indian Irrigation Project in northwestern New Mexico. The project was planned and is funded through the Bureau of Indian Affairs with design and construction to be performed by the Bureau of Reclamation. According to present plans the project will be owned and operated by the Navajo Tribe for Indians. The project was authorized in 1962, prior to the requirement for environmental studies; therefore, considerable construction work has been initiated and completed by the Bureau of Reclamation prior to the determination for the need of impact studies and statement. Publisher Southwest Environmental Research and Development Company: Las Cruces, NM May 1975</p>	
26	2437	<p>Author BRANCH OF LAND USE PLANNING Title COMPREHENSIVE PLAN FOR NAVAJO INDIAN IRRIGATION PROJECT Subtitle The general development plan is formulated to supplement existing data related to the implementation of the Navajo Indian Irrigation Project. This report assessed those goals expressed by the Navajo Tribe plus information contained in technical studies written by the Bureau of Indian Affairs and the Bureau of Reclamation. Evaluation of this and other pertinent material dictated the guidelines which were the basis for this proposed development plan. Time has limited more detailed studies such as Navajo cultural norms, social life and living patterns, education and local administrative structure. Publisher Bureau of Indian Affairs: Albuquerque, NM March 1972</p>	
26	2475	<p>Author KELLER-BLIESNER ENGINEERING, LLC Title DRAFT PROJECT SIZING ANALYSIS NAVAJO INDIAN IRRIGATION PROJECT Subtitle The recently completed Navajo Indian Irrigation Project Operation and Maintenance Review by Keller-Bliesner Engineering and the Draft Navajo Indian Irrigation Project Financial Feasibility Assessment by Dr. William D. Gorman provide sufficient cost forecast information to allow as assessment of the return potential of various stages go Completion for the Navajo Indian Irrigation Project. The results of these two studies have been combined to generate simulations of various project configurations, assessing the return potential of each. Publisher Keller-Bliesner Engineering, LLC: Logan, UT June 14, 2002</p>	
26	2526	<p>Author KELLER-BLIESNER ENGINEERING, LLC Title DRAFT PROJECT SUMMARY NAVAJO INDIAN IRRIGATION PROJECT REDEVELOPMENT PROJECT Subtitle The Navajo Indian Irrigation Project is located south of Farmington, New Mexico. The project is still in development with approximately 60,000 acres that have been completed. NIIP's objective is to irrigate 110,630 acres, which is to be divided into 11 blocks that consist of approximately 10,000 acres each. NIIP was initially designed for side-roll, hand-move, and solid set laterals. However, most have been converted to center pivots to increase irrigation efficiency and reduce labor requirements. The project first began irrigation in 1976 and since that time some of the pivots, mainline, delivery units (DU's) and pumps have become outdated or inoperable. Several areas have been taken out of production due to rising groundwater levels and surface drainage issues. The purpose of the redevelopment process is to correct these problems for Blocks 1 through 7, adding pivot automation and filter system to allow NIIP the same technologies used elsewhere to increase profitability. Publisher Keller-Bliesner Engineering, LLC: Logan, UT June 17, 2004</p>	
26	2557	<p>Author Title SAN JUAN RIVER IRRIGATION PROJECT Subtitle The irrigation project works included in this agreement are located in approximately 61 separate units which are identified as Navajo Indian Irrigation Projects, and the locations of which are shown on the attached plat entitled " Navajo Reservation Irrigation Projects, May 1938," except the two projects which are red on the plate, the Reservoir Canyon and Moencopi Tuba Project are excluded from transfer under the act of July 12, 1960. The list naming the projects on the Navajo Reservation and the plat showing their location are attached hereto and made a part of Exhibit A. These projects vary greatly in size and in the extent and type of the facilities which they contain, and the term "project works" covers facilities ranging from simple laterals to combinations including diversion dams, storage dams, storage reservoir, main canals, lateral, and structures such as head gates, checks, drops, turnouts, and flumes.</p>

26	32	Author NAVAJO INDIAN IRRIGATION PROJECT PLANNING TEAM Title ALTERNATIVE FARM ORGANIZATIONAL STRUCTURES FOR THE NAVAJO INDIAN IRRIGATION PROJECT: PROJECT CROPPING PATTERNS, LIVESTOCK ENTERPRISES, PROCESSING ACTIVITIES, CAPITAL REQUIREMENTS, EMPLOYMENT, INCOME, AND TRAINING NEEDS Subtitle The Navajo Indian Irrigation Project was authorized by Congress in 1962 with the granting of a water diversion right of 508,000 acre-feet to bring into production 110,630 acres of Land in northwestern New Mexico. The first 10,000 acres of land are expected to have water and be ready for farming in 1975. The primary purpose of the Irrigation Project is to increase employment and income opportunities for the Navajo Nation, which now has an estimated 17,000 to 18,000 unemployed and many more underemployed. The Irrigation Project represents a large investment in developing the reservation's agricultural and water resources and has the potential of providing substantially increased income and employment opportunities. 26	3370	Author NAVAJO AGRICULTURAL PRODUCTS INDUSTRY BUREAU OF INDIAN AFFAIRS Title NAVAJO INDIAN IRRIGATION PROJECT WATER DELIVERY SYSTEM OPERATION AND MAINTENANCE ANNUAL REPORT FY 1996 CONTRACT: CTN 00X10205 Subtitle The fiscal year (FY) 1996 report is the twenty-second in a series of annual reports that document water delivery from the Navajo Indian Irrigation Project (NIIP) to the user, the Navajo Agricultural Products Industry (NAPI). The two entities, NIIP and NAPI, have separate origins but are now closely integrated to achieve NAPI's mission to earn profit and provide employment for the Navajo people. The NIIP is the water storage and delivery system, lands, roads, utility installation and other facilities that make up the infrastructure for the irrigation project. NAPI is a tribal enterprise, a business entity created in 1970 to develop, farm, operate and manage the NIIP lands and to provide and maintain the NIIP Water Delivery System for the Navajo Nation. Publisher Navajo : Farmington, NM 1996 Industry Bureau of Indian Affairs	
26	35	Author VLASSIS & RUZOW Title DRAFT: NAVAJO INDIAN IRRIGATION PROJECT REPORT Subtitle Concerned about escalating cost projections and management problems affecting the economic viability of the Navajo Indian Irrigation Project and the apparent inability of the Department to formulate a single, coherent position of NIIP, the Office of Management and Budget requested the Water and Power Resources Service, and the Bureau of Indian Affairs to prepare this updated analysis. The OMB has requested that the report be submitted by June 1, 1980, and include recommendations covering (1) NIIP-cost ratios assuming various cropping

26	3871	<p>Author NAVAJO INDIAN IRRIGATION PROJECT Title NAVAJO INDIAN IRRIGATION PROJECT DEDICATION CEREMONIES APRIL 10, 1976 BLOCK 1 Subtitle The Navajo Indian Irrigation Project, commonly referred to as NIIP, is one of the largest irrigation projects in the world. When completed it will irrigate 110,630 acres of Navajo farmland. With a project as large as this, it is not possible or practical to bring all 100, 63 acres under irrigation at one time. Instead, it is being developed in eleven parts or "blocks" or approximately 10,000 acres each. The block is numbered according to the order of completion, with Block 1 being the first.</p>

26	4248	Author FISH AND WILDLIFE SERVICE Title SECTION 7 CONSULTATION BIOLOGICAL OPINION AND CONFERENCE REPORT FOR NAVAJO INDIAN IRRIGATION PROJECT BLOCKS 1-8 Subtitle As original proposed, and at full development, NIIP would irrigate 100,630 acres of Navajo-owned lands in northwestern new Mexico. In addition to the irrigated lands, the project encompasses an additional 106,219 acres, the majority of which are utilized for livestock grazing and as demonstration areas for range improvement and soil conservation efforts. The entire 216,843 acre project is operated as a tribal enterprise by the Navajo Agricultural Project Industry. Sequential development of 11 blocks of about 10,000 acres each would comprise the full agricultural project. To date, six blocks, comprising an aggregate of 54,500 acres are developed with 50,151 acres under cultivation. The proposed action would bring Block 7 and 8 (23,300 acres) into development for a total of 77,800 acres. Publisher U.S. Department of the Interior : Albuquerque, NM October 28, 1991

		<p>Subtitle According to the 1962 legislation by which the U.S. Congress authorized the Navajo Indian Irrigation Project (NIIP), a federal reclamation project on the Navajo Reservation in northwest New Mexico, it was to bring economic development to the Navajo Tribe in the form of 18,000 jobs on family farms and related enterprises, all in 14 years. The project is today just over half completed, it is a single corporate agribusiness that employs a few hundred Navajo during the peak harvest season, and there are pressures to reduce the size of the project.</p> <p>Publisher Universe: Boulder, CO 1989 National Center for Atmospheric Research</p>

Title RECONNAISSANCE INVESTIGATION OF WATER QUALITY, BOTTOM SEDIMENT, AND BIOTA ASSOCIATED WITH IRRIGATION DRAINAGE IN THE SAN JUAN RIVER AREA, SAN JUAN COUNTY, NORTHWESTERN NEW MEXICO, 1990-91 WATER-RESOURCES INVESTIGATIONS REPORT 93-4065 Subtitle: Selenium is the trace element of major concern in the San Juan River area. Concentrations of selenium larger than established standards and criteria were present in water, bottom sediment, and biota in four areas on three irrigation project: the middle and north pond in Gallegos Canyon on the Navajo Indian Irrigation Project (NIIP) (two sites), the Ojo Amarillo Canyon drainage on the NIIP (two sites), a pond receiving irrigation drainage water on the West Hammond Irrigation Project (one site), and a drainage on the eastern part of the Hogback Irrigation project (one site). Ground-water return flow from irrigated areas contributes substantially to surface water at these sites. Publisher U.S. Department of the Interior Geological Survey: Albuquerque, NM 1993	
44	5179	Title SAN JUAN BASIN IN NEW MEXICO NAVAJO NATION WATER RIGHTS SETTLEMENT AGREEMENT Subtitle The State of New Mexico and the Navajo Nation on April 19, 2005, signed the proposed San Juan River Basin in New Mexico Navajo Nation Water Rights Settlement Agreement (Settlement Agreement). The Settlement Agreement would resolve the claims of the Navajo Nation to the use of waters of the San Juan River Basin in New Mexico in a manner that would inure to the benefit of the Navajo Nation and the State of New Mexico. The Settlement Agreement is intended to provide water rights and associated water development projects, including the Navajo-Gallup Water Supply Project, for the benefit of the Navajo Nation in exchange for a release of claims to water that potentially might otherwise displace existing non-Navajo water uses in the Basin in New Mexico. 48	4190	Author SYN-AN INC. Title PRELIMINARY DRAFT CUMULATIVE ENVIRONMENTAL IMPACT ANALYSIS OF OPERATION BY ARIZONA PUBLIC SERVICE COMPANY, EL PASO NATURAL GAS COMPANY, PUBLIC SERVICE COMPANY OF NEW MEXICO, UTAH INTERNATIONAL INC., TRANSWESTERN COAL GASIFICATION COMPANY, PACIFIC COAL GASIFICATION COMPANY, WESTERN GASIFICATION COMPANY AS THE NAVAJO INDIAN IRRIGATION PROJECT: WATER QUANTITY AND QUALITY Subtitle On November 27, 1973, a meeting was held in Albuquerque, New Mexico, between representatives of the industrial concerns contributing this report and representatives of the Bureau of Reclamation's Water Quality Work Group on the Four Corners Area. It was agreed that consultants to Public Service Co. of New Mexico, the Western Gasification Company, and El Paso Natural Gas would submit reports concerning water resources effects of their clients to SYN-AN Inc. In turn SYN-AN Inc. would assemble this information plus information concerning the Four Corners Power Plant, the Navajo Mine and the Navajo Indian Irrigation Project. SYN-AN Inc. would then write the cumulative water quality and quantity impact report to the Bureau of Reclamation. The cumulative impact of operations in the Four Corners area does have an effect of some sort downstream through the entire drainage system. However, for purpose of this report it is necessary to establish some boundary conditions. Boundaries need to be established for a) the scale of operation; b) the spatial or drainage boundaries being affected by the operations; and c) the time framework of industrial activities.
