INTRODUCTION

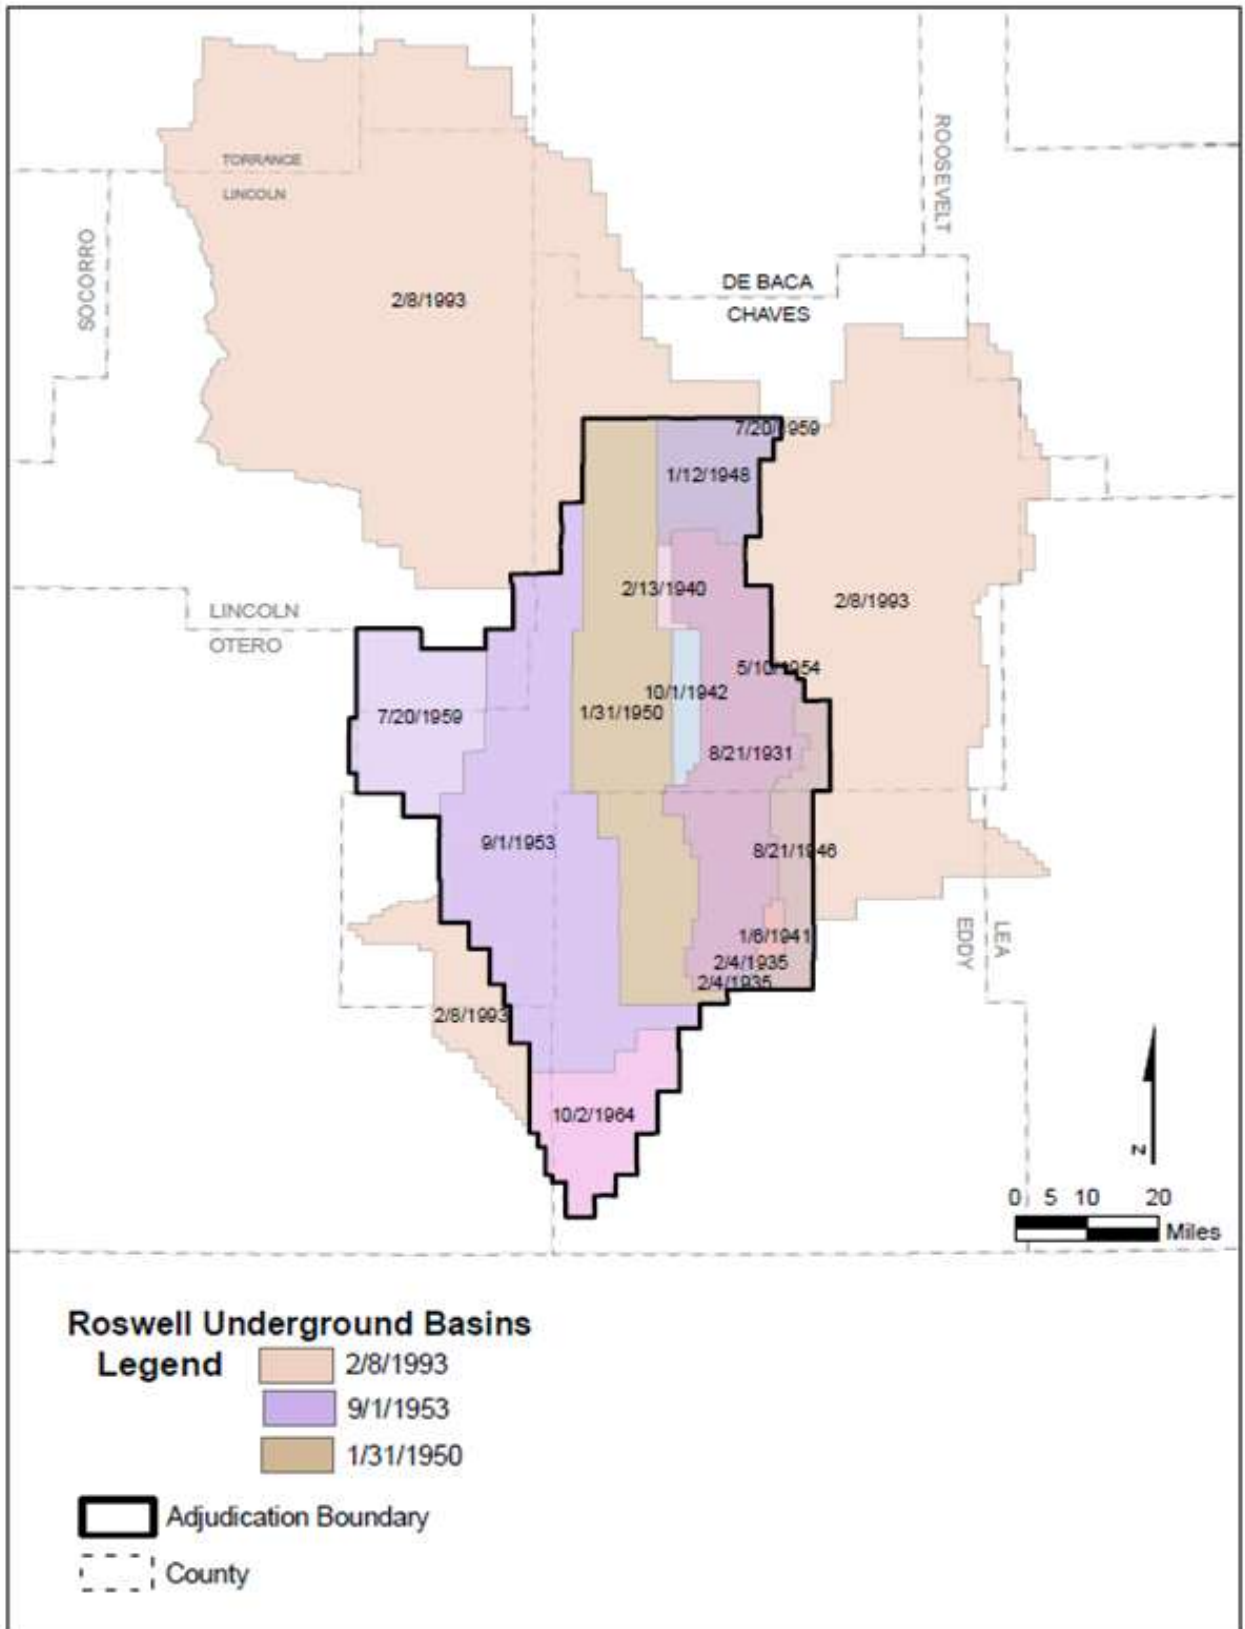

On January 10, 1966 Partial Judgment and Decree was entered under Cause No. 20294 and No. 22600 Consolidated in Chaves County, New Mexico. This Decree which adjudicated all ground water rights for irrigation, municipal, and industrial purposes in the Roswell Artesian Basin in Chaves and Eddy Counties, further provided for the metering of wells to commence January 1, 1967 and the establishment of a Water Master as follows:

“5. The State Engineer shall appoint and employ a Water Master and such assistants as are necessary in the administration and enforcement of this Judgment and Decree, provided that the appointment of the Water Master shall be subject to the approval of the Court. Such Water Master shall be appointed to commence work not later than July 1, 1966. The Water Master and any assistants appointed shall serve under the direction of the State Engineer and under the general supervision of the Court.”

The office was established with the appointment of a Water Master on February 2, 1966. The present Water Master, David L. Thomas, was appointed by the Honorable Harl D. Byrd, District Judge, on July 20, 2001.

This is the 45th Annual Report of the Water Master’s Office.

ADJUDICATION MAP OF THE ROSWELL UNDERGROUND BASIN

GENERAL

The Roswell Basin Water Master administers the diversion of water under the Adjudication Decree in an area existing, in general, six to eighteen miles west of the Pecos River and twenty miles north of Roswell in Chaves County to twenty miles south of Artesia, in Eddy County equaling a distance of approximately eighty miles. The principal use of water in the area is for agricultural purposes, which accounts for about 91.20% of the total water diverted. Municipal use of water accounts for about 7.37% and about 1.43% is used for commercial and industrial purposes.

Ground water is the principal source of water diverted under the decree and this is further divided into Artesian and Shallow ground water. Generally, a little less than two-thirds of the water is diverted from the Artesian source; about one-third is diverted from the Shallow source. A small portion is diverted from a combination of surface and well waters primarily, through the Hagerman Canal.

Approximately, 130,000 acres of land were adjudicated irrigation rights under this decree. The amount of acreage actually irrigated, however, varies from year to year as some rights have, under permit, been spread over larger acreage. Some rights have been transferred to Municipal and Industrial uses, while the Pecos Valley Artesian Conservancy District (PVACD) has retired some rights and some acreage is fallow.

Procedures for accounting of water diverted under the Hagerman Canal were revised in January 1977. Rights under the Hagerman Canal, not having a supplemental source from individually owned Shallow or Artesian wells, are considered by this office to be adjudicated under the Hope Community Ditch Decree and not under Chaves County Cause No. 20294 and No. 22600 Consolidated. Thereafter,

diversions of water for rights under the Hagerman Canal were accounted by the Roswell Basin Water Master as follows:

1. Water diverted to farms having canal rights only will not be accounted.
2. Water diverted to farms having an underground right adjudicated or permitted to supplement the entire canal right shall be accounted as other adjudicated ground water rights with appropriate provisions for 5-year accounting, carriage loss and carryover.
3. Water diverted to farms having a combined or commingled right (either as decreed or permitted) where part of the canal right is not supplemented by ground water shall be accounted by considering the canal water diverted to be in direct proportion to the ratio of the non-supplemented canal right and only the supplemented right shall be accounted unless otherwise indicated by conditions of approval of an individual permit.

The Honorable Judge David W. Bonem served during the 2010 reporting period.

Personnel of the Water Master Office at the beginning of the 2010 season consisted of David L. Thomas as Roswell Basin Water Master, Phillip Fields, Mike Hunter and Brad Todd, Assistant Water Masters.

Nelson Bernardo began on June 2010 and left December 24, 2010.

Angela Molinar retired December 31, 2009 after 25 years of service.

The operations of the Water Master Office are financed through the PVACD. Under the terms of the Adjudication Decree, the Office of the State Engineer (OSE) annually submits to the PVACD a budget for the operations of the Water Master Office. The PVACD Board then moves the Court to approve or modify the budget submitted. The PVACD reimburses the OSE for monthly expenses incurred. The funds for the PVACD are derived from a levy of lands from within the district.

METERING PROGRAM

Four hundred and fifty six meters were found inoperative during the 2010 irrigation season. Based on a total of 1507 (primary)** meters installed on irrigation, feed pen, dairy, and Hagerman Canal wells, this is 30.3% as compared to 24.9% found inoperative in 2009. Each meter was read an average of 7.0 times, including the beginning and year-end readings. The number of totalizing meters, by brand installed on these wells and the number of each brand, found to be inoperative during the 2010 irrigation season are listed as followed:

MAKE OF METER	TOTAL OF MAKE	% OF TOTAL	TOTAL IN-OP	% MAKE IN-OP	% OF TOTAL INSTALLED
McCROMETER	1385	91.9	443	32.0	29.4
ROCKWELL/SENSUS	87	5.8	13	14.9	0.9
MISCELLANEOUS	35	2.3	0	0	0
TOTALS	1507	100	456		30.3

Adjustments in the amount of water diverted through inoperative meters for 2010 totaled 4317.8 acre-feet, where 2345.97 acre-feet was Artesian underground water and 1971.83 acre-feet was Shallow underground water diverted for irrigation use.

The problem of having a large percentage of the water meters inoperative at the onset of spring pumping remains. Primary meters are being maintained, repaired and/or replaced by field personnel of the PVACD.

** Primary meters are meters the PVACD will repair or replace in the field.

CHANGES IN THE ADJUDICATION DECREE

There were no changes in the Adjudication Decree during the 2010 water year.

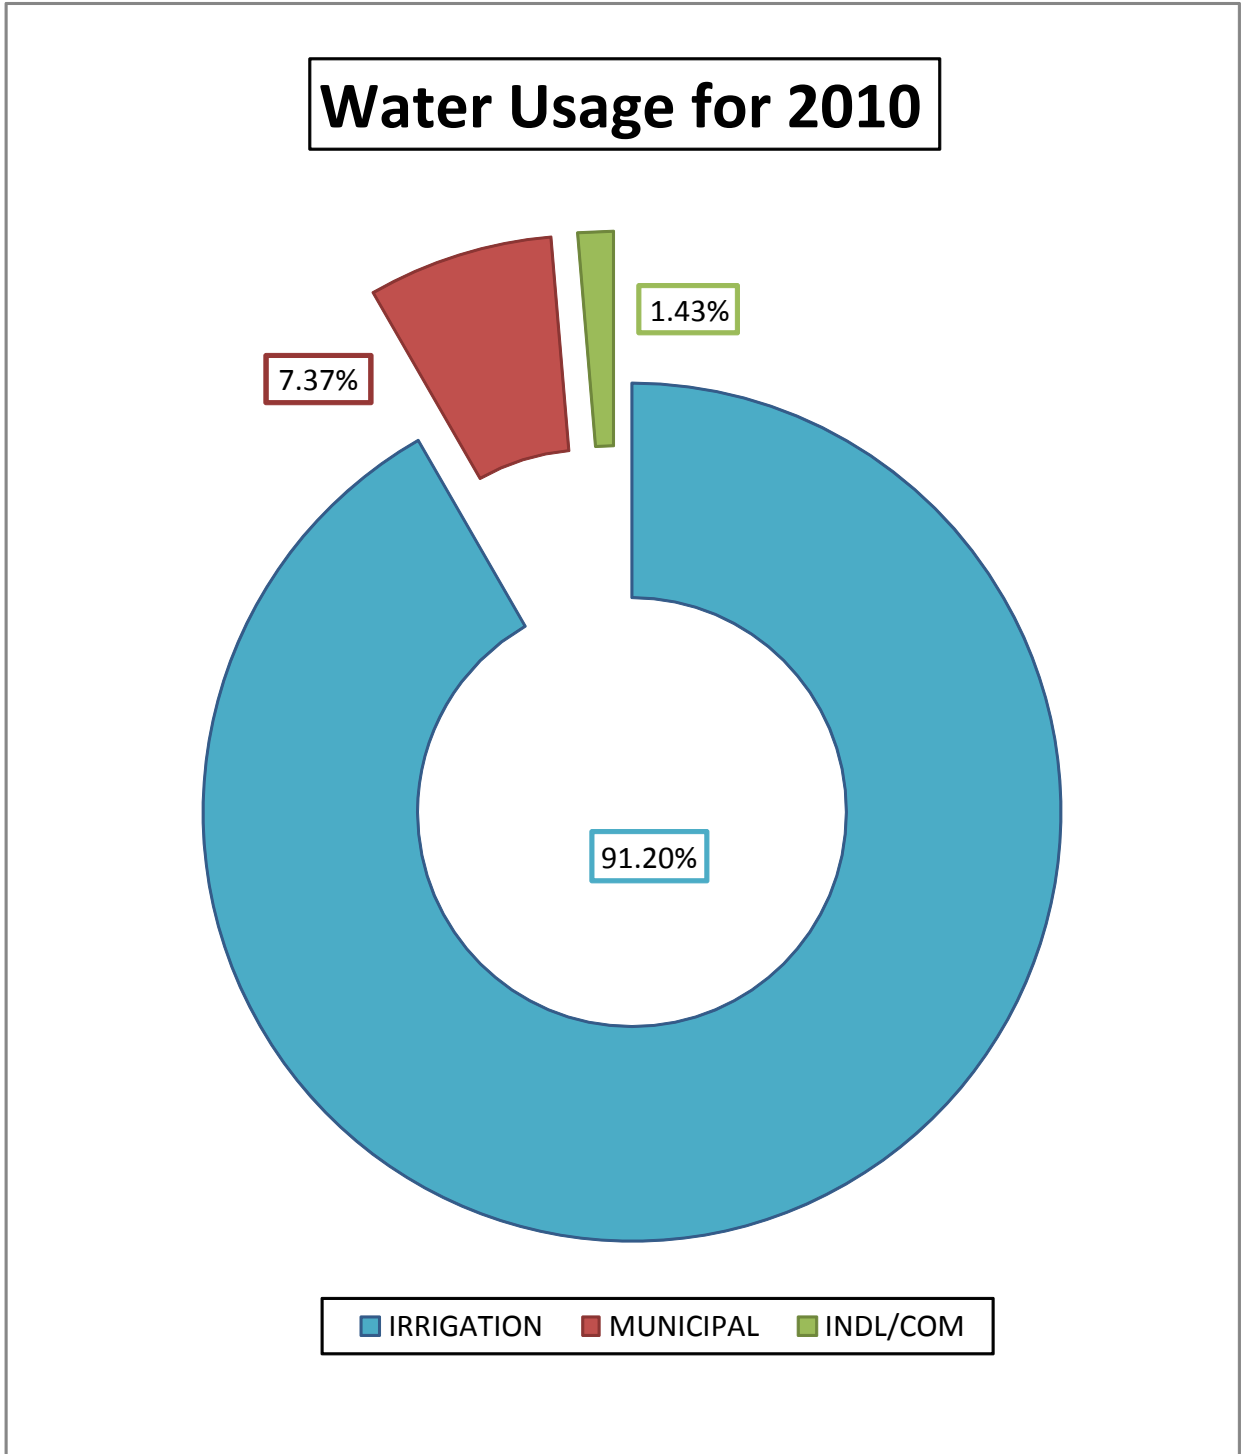

VIOLATIONS/ACTIONS

There were 3 instances of overuse in 2010.

ACCOUNTING PROCEDURE REVISION

Beginning in 1998 total diversion of water shown for commercial and industrial use and percentages thereof, will be based on “actual” diversions. In the past, diversion amounts were multiplied by 1.43 or 1.67 where applicable, which compensated for carriage loss and/or lack of return flow. Although this was the amount charged against the water right it was not actual diversion amounts. This pertains to commercial or industrial operations that were farm connected.

PERCENT OF USE FOR IRRIGATION, COMMERCIAL, AND INDUSTRIAL

USE OF WATER IN THE ROSWELL BASIN IN 2010

The total water diverted in the Roswell Ground Water Basin for the water year 2010 (November 1, 2009 – October 31, 2010) under the administrative jurisdiction of the Roswell Basin Water Master, was 308,956.89 acre-feet. Under the decree for adjudicating water rights in the basin, discrete five-year periods were set-up for accounting of the metered water. The fourth year of the ninth five-year period was 2010.

Of the total diversion, 223,185.34 acre-feet (72.2%) was from the Artesian source, 82,170.22 acre-feet (26.6%) was from the Shallow source and 3601.33 acre-feet (1.2%) was diverted from combined underground and surface sources primarily under the Hagerman Canal and the Rio Hondo.

Irrigation use accounted for 91.20% of the total diverted, Municipal type use accounted for 7.37% and Miscellaneous, Industrial and Commercial uses accounted for the remaining 1.43%. The irrigation use on 113,171.11 equivalent water right acres (acres as originally adjudicated) permitted, an average diversion of 2.49 acre-feet per acre for the basin as a whole varying from a high of 2.91 acre-feet per acre, in the Roswell – East Grand Plains area to a low of 1.03 acre-feet per acre, in the Upper Rio Felix.

The equivalent acreage figures and diversion figures do not include un-metered stock and domestic uses or water right acreage retired from irrigation under the program of the PVACD. There were eight hundred and seventy six farming units.

SUMMARY

Metered use of water during 2010 resulted in an average use, for irrigation purposes, of 2.49 acre-feet per water right acre. The total quantity diverted for all uses was the fourth lowest since metering began in 1967.

Inoperative meters continued to present some problems, however, under the present system of making adjustments, where essentially all of the water diverted through inoperative meters is accounted for. The program of checking and rating meters, with the present staff, is working at a satisfactory level.
