## INTRODUCTION

The Pecos Valley Surface Water District was declared by Order of the State Engineer on July 1, 1952. On January 20, 1956, the State Engineer issued an Order extending the District and on May 11, 1959, and June 4, 1963, orders were issued reducing the District, for economical and satisfactory operation, to its present boundaries. The District now includes the Pecos River and most of the tributaries from a line south of Santa Rosa dividing Sections 19 and 30 in Township 8 North, Range 22 East, N.M.P.M., south to the New Mexico – Texas state line.

The waters of the District are administered in conformance with specific State Engineer Findings and Order's, permits and licenses, and adjudications by the courts, including the following:

United States v. Hope Community Ditch et al., No. 712 Equity, United States District Court for the District of New Mexico (1933).

Livingston v. Neeson et al., No. 5144, Fifth Judicial District in and for Eddy County, New Mexico (1931).

United States v. Harkey et al., No. 1610 Equity, United States District Court for the District of New Mexico.

Harkey v. Parkhurst et al., No. 3258, District Court for Eddy County, New Mexico (1920).

United States v. Judkins et al., No. 112, Fifth Judicial District for the Territory of New Mexico (1912).

State of New Mexico v. L.T. Lewis, et al., Chaves County Cause Nos. 20294 and 22600 Consolidated, Partial Final Decree, Pecos River Pump Section (1992).

State Engineer Findings and Order: June 10, 1964, September 22, 1972, and approved amendment January 8, 1982.

March 17, 1980 – “Determination of Ft. Sumner Irrigation District Direct Flow Right with the Los Esteros Project in Operation.”

The waters within the District are administered by the Water Master who is appointed by the State Engineer in accordance with New Mexico Statutes Annotated, Chapter 72, Article 3, Section 3. This appointment is subsequently confirmed by order of the District Court. The Pecos River Water Master maintains offices in the District II Office of the State Engineer at 1900 West Second Street in Roswell.

## GENERAL

Timothy B Williams served as Pecos River Water Master and Secretary Computer for the 2019 irrigation season.

The operation of the Pecos Valley Surface Water District, PVSWD, is financed by assessment of the water users in the District (in accordance with New Mexico Statute 72-3-4), which includes four counties: Chaves, De Baca, Eddy and Guadalupe. The rate of assessment is determined by dividing the total approved budget for the next fiscal year by the total acre feet of water diverted in the past calendar year. Each user is then assessed his proportionate share based on the quantity of water diverted.

The field work of the Water Master consists generally of apportioning water among the users, servicing automatic water-stage recorders, making discharge measurements, and making field inspections for water use, supply and unauthorized diversions and waste.

Office work consists of computing and checking current meter measurement notes and discharge records; computing, tabulating and distributing records of drain water supply and use; computing and compiling assessment rolls; compiling reports, operating budgets; routine correspondence, and conferences with water users. Activities of the Water Master are reported to the State Engineer at the end of each irrigation season (January 1 through December 31) in accordance with New Mexico Statutes 72-3-5.

Personnel of the District II Office of the State Engineer assisted in servicing water-stage recorders, reading meters, making discharge measurements, and conducting various field investigations. Special thanks to Guy Chamberlin and Rosa Romero from District II for their assistance.

Personnel of the Water Resources Branch of the United States Geological Survey were most cooperative, especially U.S.G.S. personnel within the Carlsbad, Albuquerque and Las Cruces offices. They furnished equipment, records, and technical information, which were of great value in the administration of public surface water within the PVSWD. The Carlsbad Irrigation District and the Ft. Sumner Irrigation District extended full cooperation to the Water Master.

## PRIVATE DRAIN WATER

Private drain water comes under the Water Master's jurisdiction as the river is used as a carrier. All drain water diverted is metered and recorded. The flow available for use is considered to be the flow of the drain at any time, less ten percent loss in transit. With the exception of one drain line, those remaining have either been purchased along with public surface water rights, or are no longer operational.

In 2019, 146.53 acre-feet of measured private drain water were contributed to the Pecos River, with 146.53 acre feet of this being diverted. In 2018, 447.63 acre-feet of measured private water were contributed with 305.9 acre-feet being diverted.

## MEETINGS AND OTHER ACTIVITIES

In 2019, numerous meetings were held with water users in the field to discuss and share operational information. Discussions dealt with access problems, water usage, stream gauging techniques, recorder and flume operation and general ditch, flume and recorder maintenance. Two new recorders were installed at Rattlesnake Springs Park south of Carlsbad for recording the flow of waters for the Park Service and Washington Ranch. During the irrigation season, weekly conference calls were attended concerning operations on the Pecos River. Participants represented numerous state and federal agencies including the NM Interstate Stream Commission, NM Office of the State Engineer, Carlsbad Irrigation District, Fort Sumner Irrigation District, US Bureau of Reclamation, US Army Corps of Engineers, US Fish and Wildlife Service, NM State Parks, NM Department of Game and Fish, and the US Geological Society.

## SUPPLY AND STORAGE

Data on daily gage heights, contents of reservoirs and flow of the Pecos River at various points are collected and tabulated by the United States Geological Survey, Water Resources Branch, in cooperation with the New Mexico State Engineer and other state, local and federal agencies. These data are published annually.

Santa Rosa Dam has regulated the flows at the USGS Pecos River near Puerto de Luna gage (08383500) since April 1980. The recorded stream-flow for 2019 was 139,257 acre-feet, or 100 percent of average for the period of record, the average annual runoff for the current 20-year period is 110,849 acre feet. Peak flow for 2019 was 4,040 c.f.s. and occurred on June 16, 2019.

The Rio Hondo at Roswell gage was closed permanently on May 18, 1997. The U.S.G.S. opened the Rio Hondo near Roswell gage, located east of Roswell. The recorded runoff in the lower part of the Hondo River water shed, a major tributary of the Pecos River, was 2,615 acre feet in 2019. The USGS gage at Rio Hondo near Roswell (08393610) recorded the maximum daily flow of 50.3 c.f.s. on February 18, 2019.

2019 stream flow in the lower Pecos River Basin (in New Mexico) as recorded at the USGS Pecos River near Artesia gage (08396500) was 118,066 acre feet or 77 percent of average for the period of record, the average annual runoff for the current 20-year period is which is 103,604 acre-feet. Peak flow for 2019 at the Artesia gage was 1,470 c.f.s. and occurred on October 5, 2019.

The quantities measured at the Artesia gage include releases from Sumner Reservoir made by the Carlsbad Irrigation District. Water released from Sumner Lake is summarized in Table 1 following herewith. This information was provided by Mike Cantrell, Sumner Lake Damtender.

Below Carlsbad, flow at the USGS Black River above Malaga gage (08405500) in 2019 was 6,325 acre-feet or 72 percent of average for the period of record, the average annual runoff for the current 20-year period is 6,665 acre feet. The peak flow was 724 c.f.s. on September 11, 2019. The Carlsbad Irrigation District received the total of their decreed right of 2,800 acre-feet on September 7, 2019.

The 2019 flow of the Pecos River from Carlsbad to the Texas state line, as measured at the USGS Pecos River at Red Bluff gage (08407500), was 45,833 acre feet or 46 percent of average for the period of record, the average annual runoff for the current 20-year period is 62,307 acre-feet. The peak flow of 1,570 c.f.s. occurred on June 2, 2019.

Summaries of reservoir content and stream flow during 2019 are shown in Tables 2 and 3 following herewith.

## WATER DIVERSION

The waters of the Pecos Valley Surface Water District are administered in accordance with licenses and court decrees as set forth in the introduction of this report. In these licenses and decrees, the annual duties or diversion per irrigated acre, vary from 2.0 to 4.0 acre feet. By reaches, the various general annual duties set out in the decrees are 2.0 acre feet per acre from the Puerto de Luna area to Sumner Lake, 2.5 acre feet per acre from Sumner Lake to the mouth of Salt Creek; and 3.0 acre feet per acre (plus conveyance loss) from the mouth of Salt Creek to the Texas state line. Some individual rights in the reach below Carlsbad have decreed annual duties of 3.75 and 4.0 acre feet per acre.

At the end of the 2019 irrigation season there were 31 recording devices serviced by the Water Master in the Pecos Valley Surface Water District. Data from four U.S.G.S. stations are used to administer surface water rights within the PVSWD. Approximately 18 other recording stations are visited on a regular basis but not serviced. These are stations in which the water rights have been purchased or leased by the Interstate Stream Commission or the Bureau of Reclamation and were not irrigated in 2018. Other stations have had the power disconnected, or water for irrigation is no longer available in sufficient quantity to make pumping practical. No diversion of surface water was observed at those river and tributary diversion points in the District that were not equipped with recording devices.

The water users under the Puerto de Luna East Community Ditch below Santa Rosa, which divert from the Pecos River, diverted 3,831.37 acre-feet in 2019. Water users under the Puerta de Luna West Community Ditch diverted 2,705.91 acre-feet of surface water from the Agua Negra in 2019.

The adjudicated Direct Flow Right of the Ft. Sumner Irrigation District during March 1 through October 31 is the first 100 c.f.s. normal flow occurring at both the above Santa Rosa Lake, NM gage and the near Puerta de Luna, NM gage. The average flow available during the entire irrigation season was 88.89 c.f.s. The Irrigation District also has a right to divert for two periods, not in the regular season and not to exceed eight days each, during the months of November through February. The District did not exercise this right in 2019.

The water users in that reach of the Pecos River from Roswell to Artesia (Middle River Pumpers) had 118,066 acre-feet pass by the USGS Pecos River near Artesia gage. This was 77 percent of average.

The Carlsbad Irrigation District diverted 72,634 acre-feet from the Pecos River in 2019, as compared with 72,160 acre-feet diverted in 2018 and 72,190 in 2017. Some of the water right acreage in this District also received water from individually owned supplemental wells, and the District has a decreed right of 2,800 acre-feet from Black River.

In 2019, a total of 143,640.48 acre-feet of public surface water was diverted under the jurisdiction of the Pecos River Water Master, of which 129,002.48 acre-feet was diverted for irrigation purposes, and 14,638.00 acre-feet was available for municipal and commercial purposes. The municipal and commercial use includes the water rights of the City of Carlsbad. In addition, 146.53 acre-feet of private water (Pecos River Drain Pool) and 0.0 acre-feet of supplemental ground water were diverted under the Water Master's jurisdiction.

The Red Bluff Water Power Control District, under Permit No. 3254, approved by the State Engineer on March 30, 1971, may divert Pecos River water in New Mexico for salinity alleviation of water entering Red Bluff reservoir and for industrial use in Texas.

This permit was approved subject to an agreement signed by the Pecos River Commissioners for Texas and New Mexico and with the understanding that water measured at the existing United States Geological Survey gage, "Pecos River at Red Bluff, New Mexico," which is upstream from the Red Bluff Water Power Control District diversion, shall be considered and accounted for as water delivered at the New Mexico-Texas state line, notwithstanding the fact that the water under Permit No. 3254 will be diverted upstream from the New Mexico-Texas state line. The Red Bluff Water Power Control District submitted the usage in acre-feet on a monthly basis which was 360.508 acre-feet in 2019.

A summation of water diverted within the District above Red Bluff gage during 2019 (Table 4) and a summation of annual water diverted, by various reaches, from 2015 through 2019 (Table 5) follows.

## EXPLANATIONS

- a. Quantities diverted are inclusive of permitted carriage losses. In some cases, as at Puerto de Luna, quantities diverted include water returned, but not measured, to the river.
  - b. Water per acre does not reflect private water used.
  - c. Private water also used to supplement river right.
  - d. Pecos River Pumpers Association Drain Pool members; acreage irrigated is included in both public and claimed private-right figures.
  - e. Part of these rights, totaling 522.70 acres in addition to the 8,322.07 under the Hagerman Canal are combined with decreed groundwater rights and are duplicated in the Roswell Basin Water Master's records.
  - f. The acre feet/acre figure includes both Pecos River and Black River diversions.
  - g. Acreage under this right is part of the 25,055 acres of the C.I.D. shown as irrigated from Pecos River.
  - h. Well water is supplemented to surface right and figures are duplicated in the Roswell Basin Water Master's records.
  - i. These surface waters are no longer diverted due to insufficient quantities of water, but are supplemented by underground water. The supplemental underground water usage is reflected in the R.A. Basin Water Master's records.
- \* All water rights appurtenant to these lands have been purchased by the ISC and no further diversions to them will be made.

“P” Indicates incomplete. (1) Approximate acres irrigated or claimed. (2) Above Sumner Lake water was not metered until 1967; much of that diverted returns to the Pecos. (3) Quantities diverted include drain waters and supplemental well water. (4) Includes Hagerman Irrigation Co. waters at diversion dam. (5) Surface water from these sources are not diverted due to insufficient quantities, but are supplemented by underground waters. Supplemental well diversions are reflected in the records of the Roswell Basin Water Master. (6) Water rights appurtenant to approximately 3,318 acres of land in this area have been purchased by the Interstate Stream Commission and no further diversion to these lands will be made. (7) Water rights appurtenant to approximately 461 acres of land in this area have been purchased by the I.S.C. and no further diversion to these lands will be made.

## SUMMARY

Stream flow from Sumner Lake in the lower reach of the Pecos River basin, as measured at the gaging station near Artesia, was 114 percent of the current 20-year average. Combined storage in the four major irrigation storage reservoirs in the District (Santa Rosa which began storage April 21, 1980, Lake Brantley which began storage August 30, 1988, Sumner, and Avalon) was 9.7 percent on December 31, 2018, and 5.8 percent of total storage capacity on December 31, 2019.

Water users under the Puerta de Luna East Community Ditch diverted 3831.37 acre-feet of water from the Pecos River and the Puerta de Luna West Community Ditch users diverted 2,705.91 acre feet from the Agua Negra in 2019. The Ft. Sumner Irrigation District diverted 28,535 acre-feet, and users in the reach from Ft. Sumner to Artesia had a 114 percent of average supply. Other users in the reach from Brantley Lake to the Texas state line had 43 percent of average supply of water for irrigation, municipal, and commercial purposes.

The flow in Black River south of Carlsbad was 6,950 acre-feet or 79 percent of average. The Carlsbad Irrigation District did receive the total of their decreed right from Black River on September 23, 2019. No diversion of water to Willow Lake was observed in 2019. The Interstate Stream Commission purchased the Willow Lake water rights on October 26, 2001.

Continued surveillance was maintained of surface water use throughout the District.

Mr. John D'Antonio, P.E.  
New Mexico State Engineer  
Office of the State Engineer  
P.O. Box 25102  
Santa Fe, New Mexico 87504-5102

Dear Mr. D'Antonio:

I herewith transmit to you, in accordance with New Mexico Statutes Annotated Section 72-3-5 (1985 Repl. pamp.), the Annual Report of the Water Master of the Pecos Valley Surface Water District for calendar year 2019. This report covers activities of the Water Master and his assistant(s) during the irrigation season.

Respectfully submitted,

Timothy B. Williams, Water Master  
Pecos Valley Surface Water District

TBW

A pdf version of this report will be available on the OSE website:
